

# M SERIES

1.4 TO 10.5 MM BTU/HR

**INDUSTRIAL  
COMBUSTION**

# Multi-Fuel Versatility.

## Forced draft dual fuel burner.

The Industrial Combustion M series burner forced draft design allows for tried and true trouble-free operation and superior efficiency on boiler, heater, furnace, kiln and dryer applications worldwide. The M series features low-pressure air atomization of #2-6 fuel oil and combination natural gas/oil in uncontrolled emissions configurations.

### The M series. Setting the *standard* for firing *alternative* fuels.

#### **Precise Air/Oil Metering**

An outstanding design feature on all IC air atomizing burners, the oil metering unit precisely meters light oil volume and is not affected by changes in oil temperature or viscosity.

#### **Air Compressor Module**

A remote air compressor module provides air for heavy oil models. The module includes IC's rotary vane, pressure lubricated air compressor, air/oil lubricating reservoir, oil level indicator, inlet air filter, air pressure adjusting valve and air pressure gauge.

#### **Cam Trim**

Cam trim is a standard feature on models M34-M105 that makes it possible to adjust the burner for consistent and precise fuel-to-air ratios throughout the firing range. Excess air is controlled to a minimum through the 14-point adjustment range.

#### **Combustion Air Impeller**

Highly efficient backward-curved aluminum impeller with the ability to maintain it's original balance by avoiding the dust collection that is common with forward curved blowers.

#### **Oil Nozzle**

The IC designed low-pressure air-atomizing nozzle achieves the best atomization of oil for each burner model and application. Air is purged through the large nozzle orifice after each burner cycle to prevent after-drip and fouling.

#### **Swing-Away Air Housing**

Provides easy access to the nozzle, scanner, pilot and diffuser for inspection or removal. No disconnection of fuel or power lines is required.

# The M Burner Explained:

The M series burner offers: natural gas, propane gas, air atomized #2-6 fuel oil and combination gas and oil fuel options from 1.4 to 10.5 MM BTU per hour. Full modulation operation is standard for optimum performance to meet load demand. The M burner is an excellent choice when firing alternative fuels such as digester, waste oil, and biodiesel.

## M Burner

**Low-pressure** air atomizing system on oil with rotary vane compressor

**Piston-type** positive displacement oil metering system for precise oil control

**Cam Trim** 14-point adjustment range standard on models M34 - M105

**Parallel Positioning** available for optimal control throughout the firing range

**Nozzle Line Electric Heater** standard on medium to heavy oil burners

**Hinged Air Housing** for easy access to internal components

**Gas Manifold** on oil burners standard for easy upgrade to combination units

**Combustion Air Impeller** provides adequate combustion air for various furnace pressures and high altitude applications

**UL & cUL** listed (except ME & MEG 14-30)

Emissions	Frame	Model Range	Boiler HP	Capacities		Mode of Operation	Fuel	Parallel Positioning
				MBH	GPH <sup>1</sup>			
Uncontrolled	Size 1 - 4	14 - 105	33 - 250	1,400 - 10,500	10 - 75	Full Modulation	Gas, Oil, Comb.	Optional

<sup>1</sup> Oil input (US gph) calculated for #2 Oil @ 140,000 Btu/gal

## Uncontrolled Emissions Configuration (MG, MM#2, MMG#2, MM, MMG, ME, MEG)

<sup>1</sup> Standard gas pressure only, consult factory for lower gas pressures

<sup>2</sup> Use model "S" up to 0.75" w.c. furnace pressure, consult factory for higher pressures

<sup>3</sup> Use model "P" up to 2.0" w.c. furnace pressure, consult factory for higher pressures

<sup>4</sup> Models ME & MEG 14-30 use the integral oil/air unit as standard. Models ME & MEG 34-105 use the oil metering unit and separate compressor as standard.

Input is based on fuel Btu content and altitude of 2,000 feet or less. If altitude > 2,000 feet and < 8,000 feet, derate capacity 4% per 1,000 feet over 2,000. Consult factory for higher altitudes. If furnace pressure exceeds listed value, derate capacity 5% for every 0.5" w.c. of pressure in excess of stated. Consult factory if derate exceeds 20%. Gas input is based on natural gas with 1,000 Btu/cu.ft. and 0.60 gravity. Consult factory for 50Hz. applications.
